

40-80 pages for research-oriented thesis, 17-30 pages for AppDev thesis (where actual work is in code or other attachments)	Cover page			
	(Tiivistelmä (Only in thesis written in Finnish))			
	Abstract	(Write as the last thing)	- Environment/context/phenomenon Need(s) Research questions or goals Methods/process Results	
	Table of Contents			
	Abbreviations and terms			
	Introduction , 1-3 pages, no more!	Environment, need		=WHAT, =Thesis Reqs
	(Nothing e.g. about methods here, all other info has its own place in next chapters)	Research problem / development goal, (research questions)	(Research questions may go to Research plan in some academic type theses)	
		Scope		
		Included in the scope		
		Out of scope		
	Theoretical framework (Can also come after Research plan, if makes more sense)		preferably 4-5 reliable, independent sources per subject. At least 2-3.	Pre-existing information on the topic /methods/tools
	("Write as if your thesis would not even exist = like writing text book text . Yet select topics 100% useful for it")	~ 10-20 pages	Sources "discussing": Brown, Smith, Brown, Jones, Jackson, Brown	
			Criticism with the sources	
		Previous research on the topic you can find!	Usually the method used here is called "Literature review", "kirjallisuuskatsaus"	
	Research / Development plan (Chosen research/development methods and the selection argumentation), normally 1-2 pages, only in rare cases more (e.g., if the research method theory presented here)	=Research plan / Development plan. ((Research questions?))	Understand the difference between Data gathering methods (e.g. questionnaires, semi-structured interviews) and data analysis methods.	=HOW, =Design
	Main Research or Development , usually many chapter(s)	Divide logically in chapters and/or subchapters	THE REAL THING HERE. Sometimes the real work is in other documents that are added as attachments, and are referenced and annotated here. Sometimes, on the other hand, all work, e.g. code is not included, but fractions are inserted to the text as samples.	=DO, =Thesis Implementation
		Results and analysis of them		
	Evaluation / Assessment (Now you won't provide totally new information, but evaluate all the thesis so far. Preferably 3-5 pages)	of Results		=CHECK, EVALUATE, "Thesis testing"
		Results against goals		
		Validity of results	e.g. vs. time or scope of application, utilizability of the results	
		RQuestions answered?		
		Sources		
		Method (& tool) selection		
		Handling of methods		
		Project		
		Learning		
	(1-1,5 pages)	Further research/development	(Here or at the end of Summary)	
	Summary/Conclusion(s) (if applicable), 0,5 - 1 page		Nothing new introduced, but the summary of the thesis PLUS possible findings. Not writing about the whole thesis	
	References / Lähteet (Let's not call it Bibliography! That's a bit like "Read more here")		In alphabetical order. Recommendation: Use Mendeley based on HH library instructions. ((Word (2007) 2010-> has also automatic reference management.))	
	Appendices / Liitteet	Appendix 1		
		Appendix 2	Some of the appendices could be confidential . Then the published thesis would only have one "abstract" page describing the nature and principles of the content, but not having the content.	
		Appendix 3		
		Appendix N		

Note!!! Rememeber to look also at the secondary tab of the Thesis evaluation statement and **criteria excel** sheet!!! Gives more ideas about what to write where.
